EDUCATION

Cornell University, College of Engineering Ithaca, NY | Expected May 2028

B.S. in Computer Science and Electrical & Computer Engineering | GPA: 3.90/4.00

Relevant Coursework: Machine Learning, Probability Theory, Linear Algebra, Prove It!, Honors OOP & Data Structures, Discrete Mathematics, Functional Programming, Digital Logic, Differential Equations

Awards: USACO Gold Division; AMC 12 Distinction (top score); National Merit Finalist; SAT 1570 (800 Math)

TECHNICAL SKILLS

Languages: Python, Java, C++, Kotlin, Swift, R, OCaml

ML/Data Science: PyTorch, scikit-learn, NumPy, SciPy, pandas, statsmodels

Cloud/Systems/Tools: Linux, Git, Docker, AWS, SLURM/HPC, Ollama, RunPod, Firebase

EXPERIENCE

Paetzold Lab, Weill Cornell Medicine / Cornell Tech | *Research Intern* New York, NY | Apr 2026 - Present

- Migrated VERITAS, a multi-agent LLM research pipeline, from paid APIs to self-hosted open-source models via Ollama on SLURM/Linux HPC, cutting inference spend ~\$1,000/month.
- Designed a pre-registered 52-hypothesis stroke-recovery study using power analysis and FDR/Bonferroni correction to control multiple testing.
- Across 50 evaluation runs, correct statistics yielded correct labels only 21.4% of the time; a stronger base model further reduced accuracy, exposing a failure in evaluation design.

Cornell University | *Course Consultant, CS 2112 OOP & Data Structures* Ithaca, NY | Jan 2026 - Present

- Selected as course consultant for Honors OOP & Data Structures (CS 2112); lead weekly office hours and labs for 70+ students on software design, algorithms, and debugging, coordinating with 17 staff.

Paragon Global Investments | *Quantitative Analyst* New York, NY | Sep 2025 - Present

- Researched residual-momentum alpha across 49 industry portfolios using rolling Fama-French time-series regressions in Python; neutralized market/size/value exposures and backtested return persistence.
- Built a large-scale two-venue market-data pipeline for Kalshi and Polymarket capturing 24M+ order-book rows via tiered polling and hysteresis-stabilized market selection, sustaining a 0.04% error rate.

OON Systems | *Machine Learning Engineer Intern* New York, NY | Sep 2025 - Aug 2026

- Fine-tuned and deployed open-source LLMs with RunPod and Ollama to power AI agents automating healthcare back-office workflows, including email triage, billing-code generation, and claim routing.
- Built a HIPAA-compliant web service for protected health information and Python data pipelines feeding billing-optimization models across clinic workflows.

Cornell AppDev Project Team | *Android Developer* Ithaca, NY | Oct 2025 - May 2026

- Shipped Kotlin/Jetpack Compose product features for Resell, a Cornell marketplace live on iOS and Android with 150 monthly users; built the availability-scheduling flow for buyer/seller meetups.

Icahn School of Medicine - Nestler Lab | *Research Intern* New York, NY | Jun 2022 - Aug 2025

- Analyzed 500M+ Hi-C and epigenomic sequencing reads using Python, R, and machine learning algorithms; implemented differential expression, TAD detection, and enhancer-gene linking for depression and addiction research.

PROJECTS

AI Agent Trust Infrastructure - Cornell Blockchain | *Python, blockchain* Sep 2025 - Present

- Led a 5-engineer team building Python identity, wallet, and reputation infrastructure for autonomous agents to transact on-chain; shipped three repositories with 230+ unit tests and six Base Sepolia settlements.

TimeLens | *SwiftUI, SwiftData, Gemini, RoomPlan* Independent Project

- Built a SwiftUI/SwiftData iOS app turning Meta Ray-Ban POV frames into a searchable timeline via Gemini structured extraction; deletes images on-device after processing and anchors context with LiDAR RoomPlan.

Interests: History, tennis, hiking, weight lifting
